

WEEK 4 FINAL REPORT

During the 4-week period of the project,we managed to do the following:

First of all,we informed our students about the 17 SDGs and we explained why we had decided to work on Goal 14 Life Below Water(we are islanders).

We watched short videos about sea life and sea creatures and afterwards the students presented relevant information to their classmates in both languages,German and English.

With our Pre-Junior class,we worked on learning sea-vocabulary and made a collage of sea creatures.

Our Senor D and E classes read an article on How Important Sea Life is and How we can Protect it.After reading the article,two mind maps were created on “How to Protect” and “Why it Matters”.

We came into contact with ARCHIPELAGOS,which has its headquarters in Pythagoreion of Samos Island and a talk has been arranged to be given to our students in the near future.

A small group of students cleaned up one of the beaches in Karlovassi,Samos.

We discussed why we should respect the sea and its life and talked about our island’s sea wealth.

Finally,we talked about the benefits of living near the sea and including fresh sea food in our diet.

Admittedly,we had a great time doing all the above and it has all proved to be a great and productive experience.We are

**happy to have realized that we must LOVE and RESPECT
anything around us and that we must all work towards ONE
GOAL:LOVE for a BETTER WORLD.**
